

PERFORMANCE GEAR

Wear Something Safer™

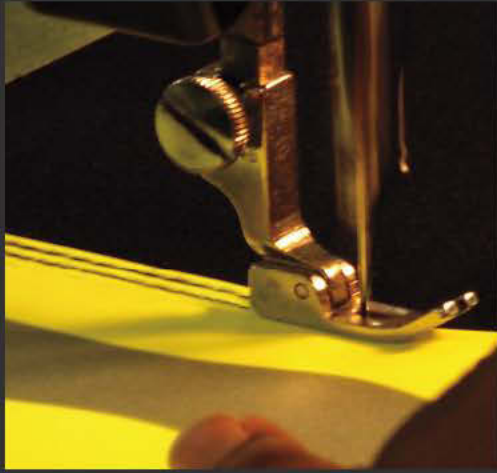

The Ricochet Difference

Deep in the heart of Philadelphia, in an imposing, restored historic factory building, Ricochet gear is manufactured by master stitchers, many of whom learned their trade in the custom-tailored mens' suit business. Ricochet gear is truly custom made for exact fit, increasing comfort and wear life. As an example, we hand cut all fabric parts to assure perfect fit, something that gear put together from parts cookie-cut on automatic machines can't match. Because we hand cut and hand fit each piece, we can offer customization along with precise fit. Have you ever felt uncomfortable in a rented tuxedo? That's because it was made for someone else. Experience the custom fit, feel and increased field of movement that only gear made exactly for you can provide. **Experience the Ricochet difference.**

Ricochet has set the bar even higher with our line of Maximum Mobility™ and Ricochet Reflex™ Performance Gear. Our engineers have examined all of the critical areas (hem rise, sleeve migration, bulky collars, restrictiveness within the crotch and knees) that have plagued firefighters for years in turnout gear designs. Ricochet has developed cutting-edge technology with Anatomical Patterning that provides gear that works with the dynamics of the body, providing Maximum-Mobility™ with greater range of motion than any other turnouts on the market. Our Anatomical Patterns are engineered to reduce heat stress, hobbling and fatigue, and designed to provide superior fit, comfort and Maximum Mobility™ throughout all three layers of your gear. Increased mobility enhances endurance and stamina.

Skilled hands and practiced eyes guide only the highest quality fabrics through the sewing process, ensuring that all seams are straight and strong. Quality control checks are made along the way and final inspectors go over the completed garments in detail to make sure your gear meets our exacting standards and arrives ready to do its work—protecting you.

MAXIMUM MOBILITY

Wear Something Safer™

COAT

Men's standard choice of 30", 32" or 35" lengths.
Female's standard choice of 27" or 30" lengths.

EDP™ "Extended Drop Panel" system.
This option allows you to extend the coats back panel by 3" or 5" in length; customizing any of our standard lengths to meet your department's specifications.

Drag Rescue Device (DRD) is fast - easy to use and ready to deploy at anytime.

Double-layer sleeve wells for additional thermal protection, keeps water out and interfaces with all glove styles.

2" Self material cuff reinforcement.

PANT

Double felled seams for increased durability.

2" Self material cuff reinforcement.

Reverse boot cut cuffs.

Pant liner inspection port.

COAT

FEATURES

K² "Kinetic Kontrol"™ Band – Offers a dynamic balance from the cuff to the hem and between the body panels and sleeves, providing *Maximum Mobility™* with freedom of movement and minimal coat rise.

Enhanced sleeve – Anatomical Patterning provides *Maximum Mobility™* at the elbow for flex and reach. The design allows you to raise your arms with zero sleeve retraction and minimal coat rise.

Contoured storm flap extension – Provides comfort and continuous thermal and moisture barrier protection. Eliminates the need for a bulky throat strap and folds in half for storage.

Bi-Swing Back – Anatomical Patterning provides *Maximum Mobility™* with freedom of movement through the shoulders and allows unrestricted arm reach, while offering a true yoke for comfort.

"M²" - Maximum Mobility™ Knee – Engineered with Anatomical Patterning so the turnout works with you and not against you. Innovative design providing *Maximum Mobility™* when squatting, climbing, kneeling or crawling. A true 3-dimensional knee designed for freedom of movement with zero restriction in one of the most critical areas. (Patent Pending)

K² "Kinetic Kontrol"™ Waistband /Integrated Belt – Engineered to be less restrictive and adjustable for personal comfort/fit to dramatically improve range of motion, while transferring weight onto the hips and not on the shoulders. (Patent Pending)
Choose from an array of pant closures:

- External belt with belt loops.
- Traditional snap/hook and dee.
- Zipper fly

K² "Kinetic Kontrol"™ Panel – Creates a dynamic balance between the crotch and leg panels for less restriction, providing the wearer with comfort and *Maximum Mobility™*.

Low-cut waist design – Anatomical Patterning provides *Maximum Mobility™*, to increase comfort and reduce weight...Turnout pants that fit like your favorite pair of jeans.

RICOCHET REFLEX

Wear Something Safer™

EUROSTYLE COAT

32" or 35" Coat length, three piece body panel design.
Female's standard coat 29" or 32" lengths.

EDP™ "Extended Drop Panel" system. This option allows you to extend the coats back panel by 3" in length; customizing any of our standard lengths to meet your department's specifications.

Two piece panel contoured sleeve design.

Underarm side panel allows arms to be raised with minimal hem rise and adds comfort to the sleeve.

Comfortable contoured collar that protects you from the elements and entry of fire debris. Easily folds over for storage when not in use.

Standard closure: FR hook and loop storm flap with a high-temp polymer zipper coat closure, or choose from our other closure options.

Extra layer of thermal protection in the upper back for increased thermal performance.

Double-layer sleeve wells for additional thermal protection, keeps water out and interfaces with all glove styles.

4" Nomex wristlets or 8" over the thumb wristlets available.

Variety of pocket options.

Breathable moisture barrier in storm flap.

Drag Rescue Device (DRD) is fast - easy to use and ready to deploy at anytime.

2" Self material cuff reinforcement.

Coat liner inspection port.

PANT

Two piece body panel design.

Low-cut waist design to maximize mobility, increase comfort and reduces weight.

Streamlined fly flap with Velcro, snap/hook and dee closure.

Two Take-up straps positioned on each side of the waist to adjust the fit of the pant.

Knee reinforcement and padding for increased thermal protection and comfort.

Double felled seams for increased durability.

2" Self material cuff reinforcement.

Reverse boot cut cuffs.

Pant liner inspection port..

Ricochet, located in Philadelphia, Pennsylvania, has more than 20 years of experience producing sophisticated high-tech gear for the rigorous and specialized needs of the military, industrial chemical workers and emergency first responders. We use our unique expertise to create high-quality protective clothing for career and volunteer EMS and fire department personnel.

Our extensive experience has helped us develop the skills, knowledge and proven manufacturing techniques to provide the ultimate in Personal Protective Equipment (PPE) for emergency first responders, involved in Emergency Medical Services (EMS), technical rescue and, now, fire fighting.

Our dedication to quality means innovation. We are not satisfied with just meeting minimum requirements. We strive to surpass current industry standards and anticipate future ones.

We create value for our users by offering top-quality protective clothing with extensive options for customization at very competitive prices. From the selection of fabrics to the sealed seams to the type of stitching, every detail is engineered to meet the needs of the wearer for ultimate protection, comfort and mobility. Ricochet, an ISO 9001 certified facility, strives to provide industry leading customer service and delivery times on all of our protective clothing.

As a leader in the protective clothing industry, Ricochet has created sound partnerships with these leading suppliers.
